

Description

Disposable face masks act as a protective barrier to prevent splashes, sprays, large droplets or splatter from entering the wearer's mouth and nose. These masks include a non-woven fabric outer layer, high-density filter layer, and skin-friendly contact layer. Ear loops and a flexible nose wire improve fit and feel during movement. The snug fitting procedural mask performs better than standard cloth masks or pre-molded dust masks.

Product Features

- Non-woven Material
- 25+25+25gsm Thickness
- 3-Layer Construction; Non-woven polypropylene outer layer, filter layer with melted fabric, and gentle inner layer.
- Flexible nose wire
